

NRCE organizes Equine Health Camp on World Veterinary Day

An equine health camp and interactive meet of equine owners was organized by National Research Centre on Equines on April 26, 2014 on occasion of World Veterinary Day at Rajli and Gurana village in Hisar. During the health camp equines were examined for various ailments by a multidisciplinary team of scientists and technical officer from NRCE in Rajli and Gurana villages. Deworming tablets and mineral mixture was provided to equine owners free of cost and treatment was given to sick and wounded equines. Pregnancy diagnosis was also done at farmer's door during the camp.

Equine owners interacted with multidisciplinary team of scientists from NRCE on various aspects of equine husbandry and management. The interaction was useful to equine owners in terms of knowledge gain and information sharing about deworming schedule, prevention and management of ticks, colic and lameness in equines. During the interaction meeting the equine owners were also made aware about the equine welfare, importance of rest during work periods, use of suitable bits and harness, proper and timely shoeing and grooming of animals and adoption of improved equine husbandry and management practices.
