

## ***Aervajavanica* extract for the treatment of exuberant granulation tissue and tumors in horses (Patented technology)**

### **Technology Details**

Wound healing in horses is often complicated by the excessive growth of granulation tissue (EGT). Previously there is no effective and satisfactory medicinal treatment available for EGT, cauterization with copper sulphate and triple sulphar powder is being used presently, but it is not successful on large size EGT and needs repeated visits of the expert persons. Present product was extracted from the leaves of *A. javanica* by sequential fractions. Spray of this product on the EGT and tumors (Melenoma, fibroblastic sarcoid, warts) is enough for healing and recovery, it also not causes cauterization of tissue, tissue heals in natural ways without leaving scar in case of exuberant growth of tissue and tumors in horses.

### **Licensing terms**

- Nature of License: Non-exclusive
- Duration of the License: 05 years
